

## Liferaft for use with a parachute HAHO system

Liferaft Airsafe 510 has been designed for and in close co-operation with the Swedish Paratroopers FJS/FA.

The liferaft is is pressure packed to minimise the physical size. The pack is combined with a stiffened seat and is attached to the bottom of the parachute harness by webbing straps to provide a comfortable seat whilst flying the parachute.

To prevent the parachutist from slipping backwards through the harness, the seat incorporates an integral canvas sheet that attaches to the parachute pack using snaphooks.

## Technical description

Liferaft Airsafe 510 is based on the standard Single Seat Liferaft type RFD LRU-23P.

### Typical liferaft dimensions:

**Height:** 820 mm

**Length:** 1570 mm

**Maximum width:** 980 mm

The liferaft can be deployed either manually using the integral ripcord or automatically via the ripcord attached to the parachutist's life preserver.

### Airsafe 510 technical data:

**Height:** 120 mm

**Length:** 500 mm

**Width:** 180 mm

**Weight:** Incl. CO<sub>2</sub> bottle 4,69 kg

**Colour:** Black
