

SAR MARKING AND OIL SAMPLE FLOTATION SYSTEM 2000

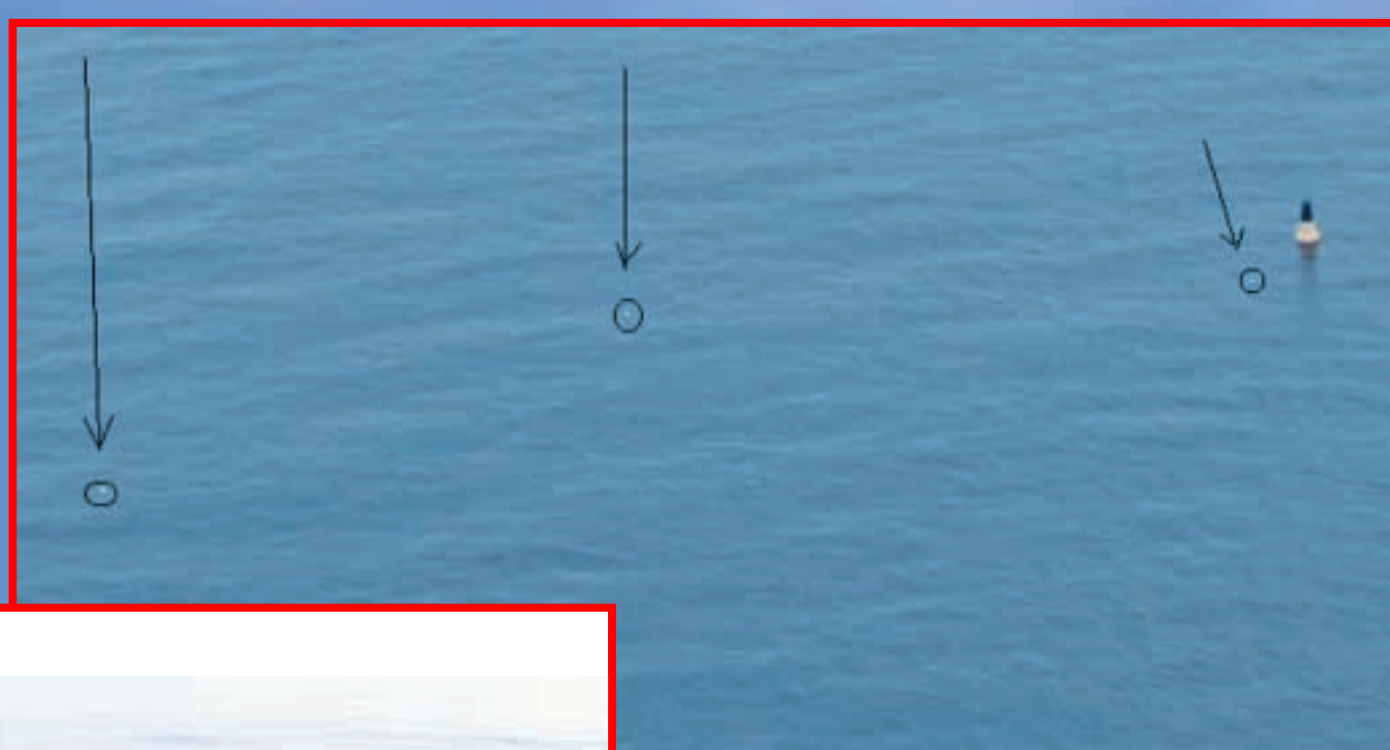

The Flotation System 2000 is used during SAR operations and in oil pollution situations.

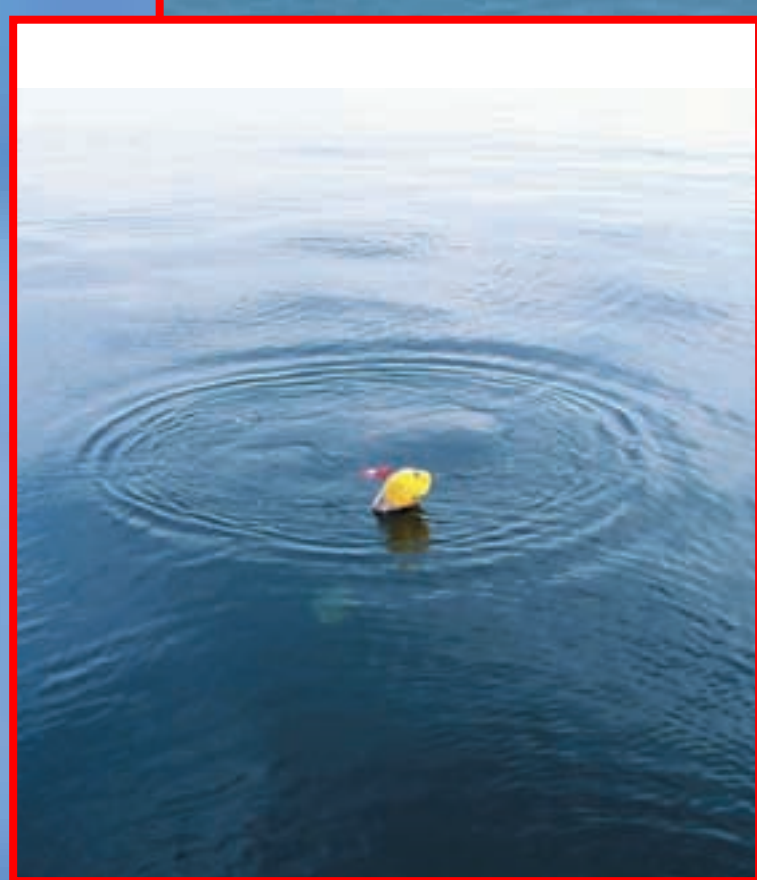

Search and Rescue operations become more efficient with the Flotation System 2000.

After deployment use the results will be analysed in a dedicated laboratory.

Three Systems dropped close to the target.

The system is fully automatic, weighing no more than 1350 grams and easy to operate.

The special designed oil-absorbing filter is used as evidence material.

Oil pollution area photographed from the air by the Swedish Coast Guard.

The results will be collected and transferred by the Coast Guard sea units.

Developed in co-operation between the Swedish Coast Guard and Airsafe Sweden AB
BOUY SYSTEM 2000
