

Airsafe A-290 Life Jacket

Twin cell 150N life preserver for all occupants in aircraft and helicopters

The Airsafe A-290 Life Jacket is based on the TSO approved life preserver. It comes with a water activated safety light, two separate inflation valves and two CO₂ cartridges allowing easy single-handed operation. It is folded into its protective valise using a special method to ensure safe and complete chamber expansion.

Designed for comfort, the jacket is sewn into a protective Cordura nylon valise with a flame proof filling material, allowing a flight helmet to be worn without obstruction or straining the wearer's neck. The A-290 is easily donned and removed without having to pull it over the head and comes with a 40 mm waist strap with a quick release buckle.

Optional equipment include one or two removable pockets for signal flares or an emergency locator transmitter (ELT).

Users include Swedish Coast Guard Flight Division, Swedish Police Air Support Unit, Swedish Armed Forces, Patria Helicopters and Saab Nyge Aero.

The A-290 can be modified with a Helicopter Emergency Egress Device pocket. Please see separate A-290 HEED product sheet for further information.

The A-290 can be supplied in any colour combination and with a company name or logotype.

Technical Data

Part Number:	2-0290
Weight:	750 grams
Volume:	> 16 liters
Cylinder size:	2 x 16 g CO ₂
Buoyancy:	> 150N
Operation temperature:	-40° C to +60° C
Inspection interval:	Yearly
Material, valise:	Cordura with flame proof filling
Colour, chamber:	Yellow or red
Colour, valise:	Various
