

Oil Sampling Buoy

For fast recovery when time is a factor

The Airsafe Oil Sampling Buoy is a flotation system for marking out and sampling environmental pollution. It is also suitable for locating persons in distress for SAR operations.

Complete with a sea anchor, the highly visible buoy inflates automatically when in contact with water and comes in an air deployable compact casing. Its unique absorbing filter quickly samples oil spills for evidence in matching the discharge to a specific vessel.

The Airsafe Oil Sampling Buoy can be equipped with a VHF transmitter to assist recovery.

Features

- Optional VHF Transmitter
- Strobe light
- Sea anchor/parachute
- Retro reflectors
- Oil absorbing filter
- Oil spill marker
- SAR marker

Space-saving compact size for stowage

A sea anchor ensures controlled drift in water

Technical Data

Part Number:	2-480-4
Weight:	1,500 g
Length:	250 mm
Diameter:	100 mm
Deployment altitude:	100-300 ft
Deployment speed:	70-150 kt
Wind limitation:	35 kt

An introductory program including courses and training equipment is available on request.
