

## Airsafe 1100 Dispatcher Harness

### Adaptable to customer requirements

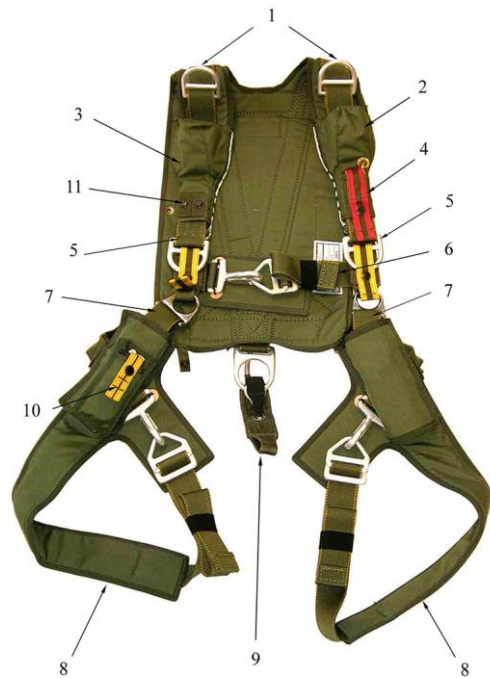

Originally developed in cooperation with the Swedish Air Force for dispatchers and crew on C-130 aircraft, the Airsafe 1100 is an integrated parachute harness approved in Sweden for use with the Butler Quick Attachable Chest with HX-500 canopy. The rescue parachute attaches to the D-rings, connected to two Capewell canopy releases, on the front of the harness.

The harness can be used in combination with a CSAR vest worn under the harness. It also has a removable pocket for emergency oxygen. The pocket can be adapted to fit any oxygen system.

The harness is attached to a fixed point in the aircraft using an elastic attachment strap. There is a three-ring release strap on the back for quick release. There are also tactical flight attachment straps that can be fastened to either the chest strap or the shoulder D-rings.

### Custom designs

The Airsafe 1100 Dispatcher Harness can be modified to meet specific customer requirements.

### Airsafe 1100 Dispatcher Harness

- (1) D-rings for tactical flight
- (2) Cover for Capewell Canopy release
- (3) Riser Cover
- (4) Release handle
- (5) Riser D-rings
