

Airsafe 520 Life raft

Space saver in flight, life saver in emergency

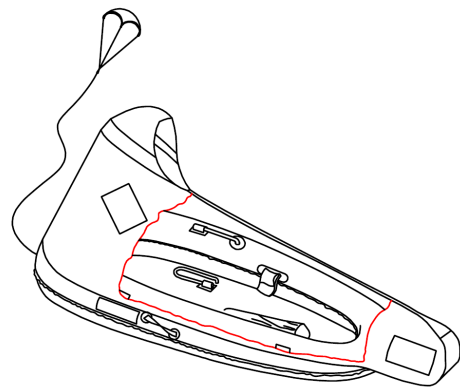

The Airsafe 520 is a single seat life raft, based on the RFD SL30 Mk.4, designed to the highest standards for use by helicopter crew in an emergency situation.

Manufactured from polyurethane proofed nylon fabric with an inflatable floor and a single skin high visibility orange canopy, the life raft is pressure packed in a light-weight navy blue valise designed for compact stowage in the AW109 helicopter cockpit. It features a yellow release grip, an orange flap covering the inflation handle and a mooring line with a snap hook that can be attached to any hard point of the helicopter, should it be necessary to deploy the pack in an emergency.

Your Airsafe 520 Life raft comes as a portable unit ready for use, offering first-rate seaworthiness whilst providing insulation and protection from the elements to the person in distress.

Compact design for space saving stowage
